APTUS
ASSA ABLOY

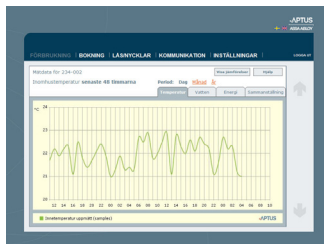

Aptus develops and manufactures customer-oriented security and information systems for safer buildings and greater living comfort

Communication and information in your building.

Communicate more.

It doesn't matter whether you're an administrator, a property owner, a rental tenant or a tenant owner. Everyone in a building needs information and communication. Our products meet these needs, and the Agera 19 touch screen is top of our range.

A selection of our products: Aptus key, AptusPortal (shows consumption), Agera and Hålla.

SMART BUILDING ADMINISTRATION. The services most requested by our tenants include fault reporting, laundry room booking, personal information, modification of entry phone numbers, key blocking and live public transportation timetables. Agera 19 provides all of this and more. You can add other functions if you want.

GOODBYE TO PAPER NOTES AND DYMO TAPE. Now you can decide where and for how long information should be published. For example, if you want to modify a name display on Hålla or

change the tenant register in the stairwell, you can do it with a simple click. The easiest way to administer all this is with the webbased Hant-era software. It publishes articles in JPEG, PNG, GIF or PDF format.

HARD-WEARING. Agera 19 is waterproof with a shock-resistant touchscreen. It has an integrated reader and an energy-saving motion detector, so the screen only lights up when needed.
